Subject:

Sequence search of Application No.09/475,158

Please do a standard search on:

- (i).SEQ ID NOS: 3 and 5 against both commercial and interference amino acid databases;
- (ii). SEQ ID NOS: 14, 15, and 16 against both commercial and interference nucleic acid databases;
- (iii). AlaValSerGlulleGlnLeuMetHisAsnLeuGlyGlyGlyGlyGly against both commercial and interference amino acid databases.

Thank you very much!

                                                                                                                                                                                                                                                                                                                                                       o;
                         Compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or S-(L)_n-R, are namino terminal signaling functional domain of parathyroid hormone (PTH); Lis a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-14) or a PTH-related protein (PTH-rP) (1-34), R_1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodaling treating diseases in a mammalian call having PTH-1 receptors, or screening for a peptide or non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large mative PTH or PTHTP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                   PTH; parathyroid hormone; conjugate; bone mass; bone reformation; resorption; remodeling; tether1; osteoporosis.
                                                                                                                                                                                                                  .

Compounds of the structure or formula S-(L) _n-B, R_1-S-(L) _n-R or S-(L) _n-R ar an amino terminal signaling functional domain of parathyroid hormone (PTH): L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(-1,34) or a PTH-related protein (PTH-rP) (1-34); R l is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases in a mammalian cell having PTH-1 receptors, or screening for a peptide or non-peptide PTH (latined). The new compound can be administered by inhalation unlike the large native PTH or PTH-P which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human parathyroid hormone; hPTH; variant; analogue; calcium; depletion; fixation; resorption; osteopathy; osteoporosis; hypoparathyroidism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New active para-thyroid hormone variants - used for treating or preventing osteoporosis etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ..

veterinary medicine. These peptides may also have increased iontophoretic transdermal transport compared to wild type PTH and can be produced in high yield in recombinant E.coli. (Updated on 25-MAR-2003 to correct PN
                                                                                                                                                      Analogue; truncated human parathyroid hormone; PTH; hPTH; substitution; osteoporosis; hypercalcaemia; hyperparathroidism; metabolic bone disease; human; veterinary medicine; iontophoretic transdermal transport;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New active analogues of parathyroid hormone - with increased activity, stability in serum etc., esp. for treating osteoporosis, also related DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequences given in AAR74429-520 represent analogues of the 34 amino acid sequence of truncated human parathyroid hormone (PTH). These manalogues have increased activity and longer serum half life than native PTH due to eg. substitution of Met residues with Leu residues and replacing the carboxy Phe with Tyr. The carboxy terminal may also be modified by the addition of a homoserine residue or analogue, or by the addition of residues 35-84 of wild type PTH (see AAR74410). These PTH analogues may be used in the treatment of osteoporosis or hypercalcaemia, hyperparathroidism or other metabolic bone diseases in human or account of the second of the second or analogues.
                                                                                                                                                                                                                                                                                                                                               (Hse), Hse lactone, Hse amide or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    80.6%; Score 129; DB 2; I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptide(s) are parathyroid hormone derivs. - used in hormone therapy, for treating osteoporosis hyperparathyroidism and hypertension.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hPTH; protease resistant; osteoporosis; hypoparathyroidism; hypertension.
This peptide is an example of a highly generic formula covering parathyroid hormone variants useful for treating or preventing bone conditions associated with calcium depletion/resorption, in cases where calcium fixation is required (esp. osteoporosis) or to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The peptide is an analogue of human parathyroid hormone fragment 1-34. The peptide modification defined increase resistance to proteases and therefore persistance in the blood. The peptide is used in therapy of osteoporosis, hypoparathyroidism and hypertension. The peptide may be synthesised by the Merrifield solid phase method in an automatic apparatus. See also AAR22290-99. (Updated on 25-MAR-2003 to correct PA

parathyroid hormone (PTH) binds to PTH receptors in renal and osseous cells, initiating signal transduction. It has been identified that the amino terminal of PTH is important for PTH receptor binding, while the amino terminal is important for signal transduction. The present sequence is a human PTH peptide, with an amino-terminal modification which results in effective activation of the PTH-2 receptor and therefore downstream signalling. Aberrant PTH activity has been implicated in a number of disorders: osteoporosis, osteopenia, hypoparathyroidism and hypercalcaemia. In turn, hypercalcaemia is associated with hypernephroma and a variety of cancers breast, lung and prostate carcinoma, multiple myeloma and epidermoid cancers of the head, neck and cesophagus. This peptide would be suitable for prophylaxis and treatment of the above fracture repair. The present sequence would be suitable for residue at position 1
                                                                                                                                                                                                                                                                                                                                                                New parathyroid hormone (PTH) analogs having one or more amino acid substitutions that confer PTH-1/PTH-2 receptor agonist properties, to treating old age osteoporosis and post-menopausal osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Osteoporosis; agonist; PTH; human; anti-resorptive therapy; bone fracture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 33;

Parathyroid hormone peptide; PTH; renal call; osseous cell; human; signal transduction; osteoporosis; amino-terminal modification; bone disease; parathyroid hormone receptor; osteopaenia; hypoparathyroidism; fracture repair; hypercalcaemia; cancer; osteopathic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             bis-phosphonates or calcitonin. The present sequence represents a specifically claimed peptide. NB: This sequence is not shown explicitly in the patent but was generated using the sequence of human parathyroid hormone as shown in Entrez Locus Number AAA29146
                                                                                                                                                              Parathyroid hormone analogue peptide compounds - used for stimulating bone growth, e.g. in treatment of bone fractures or osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human amino-terminal modified parathyroid hormone analogue # 5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                The present sequence is a specific example of a human parathyroid hormone (hPTH) analogue from fragment 1-34 in which at least one of the amino acid residues at positions 7, 11, 23, 24, 27, 28 and 31 is cyclohexylalanine (Chal. In this example the Leu residue at position 11 of the wild-type has been substituted by Cha. The hPTH analogues stimulate bone growth and so are useful in human or veterinary medicine for treatment of osteoporosis and bone fracture, optionally in conjunction with anti-resorptive therapy (bisphosphonates and acalitonin). N.B. The present sequence does not appear in the specification. It corresponds to the known hPTH 1-34 fragment with the modifications as stated in the claim
                                                                                                                                                                                                                                                                                       New variants of human parathyroid hormone 1-34 peptide - which stimulate bone growth and are used for treatment of osteoporosis and bone fracture.

                                                                                                                                                                                                                                                                                                                Parathyroid hormone (PTH) binds to PTH receptors in renal and osseous calls, initiating signal transduction. It has been identified that the carboxyl terminal of PTH is important for PTH receptor binding, while the amino terminal is important for signal transduction. The present sequence is a human PTH speptide, with an amino-terminal modification which results in effective activation of the PTH-2 receptor and therefore downstream signalling. Aberrant PTH activity has been implicated in a number of disorders: osecoporosis, osteopeania, hypoparathyroidism and hypercalcaemia. In turn, hypercalcaemia is associated with hypernephroma and a variety of cancers; breast, lung and prostate carcinoma, multiple myeloma and epidermoid cancers of the head, neck and oseophagus. This peptide would be suitable for prophylaxis and treatment of the above disorders. In addition, the present sequence would be suitable for residue at position 1
                                                                                                                                                                                                                                                New parathyroid hormone (PTH) analogs having one or more amino acid substitutions that confer PTH-1/PTH-2 receptor agonist properties, useful for treating old age osteoporosis and post-menopausal osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human parathyroid hormone; hPTH; variant; analogue; calcium; depletion; fixation; resorption; osteopathy; osteoporosis; hypoparathyroidism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or S-(L)_n-R, are new. S is an amino terminal signaling functional domain of parathyroid hormone (PTH); L is a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-34) or a PTH-related protein (PTH-rP) (1-34); R 1 is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor sequence. The new compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
conditions associated with calcium depletion/resorption, in cases where calcium fixation is required (esp. osteoporosis) or to treat hypoparathyroidism
                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PTH; parathyroid hormone; conjugate; bone mass; bone reformation; resorption; remodeling; tetherl; osteoporosis.
                                                                                                                                                                                                                                                   .

PIR 80:\* 1: Dir1:\* 2: Dir2:\* 3: Dir3:\* 4: Dir4:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Justify and hormone - rat (fragment)

Cispecies: Rattus norvegicus (Norway rat)

Cispecies: Rattus norvegicus (Norway rat)

Cispecies: Rattus norvegicus

Cispecies: Accession: 151851

Rischmelzer, H. 1. 21, 228-229, 1984

Ay: General Technol. 21, 228-229, 1984

Ay: Title: Nucleotide sequence of cloned cDNA encoding rat prepro parathyroid hormone. Ay: Reference number: 151851

Aycession: 151861

Aycession: 151861

Aycession: 151881

Aymolecule type: mRNA

Ayelecule type: mRNA

Cisconetics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Physoparathycodies...

The Annouse gene sacciated with automomal recessive familial isolated homome genes associated with automomal recessive familial isolated and the preparathycodism.

1. Tollan. Endocring. Metabolic council and the sales in the property of the prelaty of hypoparathycodism.

1. STMILMARTY Belongs to the prelatyloid homome family.

2. STMILMARTY Belongs to the prelatyloid homome family.

3. STMILMARTY Belongs to the prelatyloid homome family.

4. STMILMARTY Belongs to the prelatyloid homome family.

5. STMILMARTY BELONGS to the prelation family belongs to the prelation.

5. STMILMARTY BELONGS to the prelation family belongs to the prelation.

5. STMILMARTY BELONGS to the prelation family belongs to the precursor.

5. STMILMARTY BELONGS to the prelation family belongs to the precursor.

5. STMILMARTY BERSON STMILMARTY BELONGS to the prelation family belongs to the precursor.

5. STMILMARTY BERSON STMILMART STM

"Nucleotide sequences of parathyroid gene in five species of macaque
of Thailand.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         J. Sci. Res. Chulalongkorn Univ. 23:135-142(1998).
-!- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                               Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi, Mammalia, Butheria, Buarchontoglires, Primates, Catarrhini, Cercopithecidae, Cercopithecidae, Macaca.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Jr.; Brothamion acid sequence of porcine parathyroid hormone."; Biochemistry 13:1994-1999(1974).

-!- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.

-!- SIBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the parathyroid hormone family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PROTEIN SEQUENCE OF 26-115.

Gene 160:241-243(1995).
-!- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the parathyroid hormone family.

"Molecular cloning of feline preproparathyroid hormone.";
Submitted (OCT-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: PTH elevates calcium level by dissolving the salts in bone and preventing their renal excretion (By similarity).
-!- SUBCELLULAR LOCATION: Secreted (By similarity).
-!- SIMILARITY: Belongs to the parathyroid hormone family.

MACHOELDE S. Demay M., Pines M., Hurwitz S., Potts J.T. Jr.,

Minclectide sequence of cloned cDNAB encoding chicken

Treproparathyroid hormone.";

Treproparathyroid hormone.";

J. Bone Miner. Res. 3:689-698(1988).

- I-FUNCTION: PTH elevates calcium level by dissolving the salts in

Done and preventing their renal excretion.

- SIMILARITY: Belongs to the parathyroid hormone family.

- SIMILARITY: Belongs to the parathyroid hormone family.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                  November 21, 2005, 16:05:03; Search time 33 Seconds (without alignments) 77.665 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 162,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MOLECULE TYPE: protein
FEATURE:
FRATURE:
NAME/KEY: Modified-site
NAME/KEY: Modified-site
NAME/KEY: Modified-site
NOTHER INFORMATION: from the group consisting of Hol, Ho, a homoserine
OTHER INFORMATION: amide, or the sequence of amino acids comprising
CHER INFORMATION: residues 35-84 of PTH."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

Sequence 20, Application US/11065943

Publication No. US20060250131A1

GENERAL INFORMATION:
APPLICANT: USCHIECUBRE,
APPLICANT: VICHIER-UUC

APPLICANT: VICHIER-UUC

TITLE OF INVENTION: METHODS FOR OBTAINING THERMOSTABLE ENZYMES, DNA POLYMERASE I

TITLE OF INVENTION: WARLANTS FROM THERMUS AQUATICUS HAVING NEW CATALYTIC ACTIVITES,
TITLE OF INVENTION: METHODS FOR OBTAINING THE SAME, AND APPLICATIONS OF THE SAME
FILE REPRENCE: 2664-261830XCIP

CURRENT APPLICATION NUMBER: US/11/065,943

Compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or S-(L)_n-R, are new. Si as an amino terminal signaling functional domain of parathyroid hormone (PTH); Lis a linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a C-terminal binding portion of PTH(1-134) or a PTH-reated protein (PTH-rP) (1.134); R. I is the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor agreemen; and R is (a portion of) PTH-1 receptor adjunction are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling treating diseases and disporder associated with decreased tether! activity, increasing cAMP in a mammalian cell having PTH-1 receptors, or screening for a peptide or inchalacion unlike the large native PTH or PTH or PTH which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PTH; parathyroid hormone; conjugate; bone mass; bone reformation; resorption; remodeling; tether1; osteoporosis.

Compounds of the structure or formula S-(L)_n-B, R_1-S-(L)_n-R or S-(L)_n-R are mind the parathyroid hormone (PTH); Lisa linker molecule present n times (where n is a positive integer 1-10 (preferably 4)); B is a Cterminal binding portion of PTH(-1,34) or a PTH-related protein (PTH-rP) (1-34), R. lis the PTH-1 receptor signal sequence; and R is (a portion of) PTH-1 receptor show compounds are used for treating mammalian conditions characterized by decreases in bone mass, determining rates of bone reformation, bone resorption and/or bone remodeling, treating diseases in a mammalian cell having PTH-1 receptors, or screening for a popular in a mammalian cell having PTH-1 receptors, or screening for a peptide on non-peptide PTH (claimed). The new compound can be administered by inhalation unlike the large native PTH or PTHTP which avoids the need for regular injections to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                              ö
New compound comprising an amino terminal signaling functional domain linked to a carboxy-terminal binding portion of parathyroid hormone for treating mammalian conditions characterized by decreases in bone mass.
                                                                                                                                                                                                                                                                                                                                                                                              Gaps
